BUREAU OF PUBLIC WATER SUPPLY

CALENDAR YEAR 2011 CONSUMER CONFIDENCE REPORT CERTIFICATION FORM

C24089
List PWS ID #s for all Water Systems Covered by this CCR

The Federal Safe Drinking Water Act requires each community public water system to develop and distribute a consumer

TUXACHANIE ESTATES
Public Water Supply Name

confide must be	nce report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR mailed to the customers, published in a newspaper of local circulation, or provided to the customers upon request.
Please.	Answer the Following Questions Regarding the Consumer Confidence Report
	Customers were informed of availability of CCR by: (Attach copy of publication, water bill or other)
	Advertisement in local paper On water bills Other Date customers were informed:/_/
×	CCR was distributed by mail or other direct delivery. Specify other direct delivery methods:
,	Date Mailed/Distributed: 7/1/12
	CCR was published in local newspaper. (Attach copy of published CCR or proof of publication)
	Name of Newspaper:
	Date Published:/_/
	CCR was posted in public places. (Attach list of locations)
	Date Posted://
	CCR was posted on a publicly accessible internet site at the address: www
CERT	<u>IFICATION</u>
consiste	y certify that a consumer confidence report (CCR) has been distributed to the customers of this public water system in and manner identified above. I further certify that the information included in this CCR is true and correct and is ent with the water quality monitoring data provided to the public water system officials by the Mississippi State nent of Health, Bureau of Public Water Supply.

Mail Completed Form to: Bureau of Public Water Supply/P.O. Box 1700/Jackson, MS 39215 Phone: 601-576-7518

6 - 18 - 12 Date

2011 Drinking Water Quality Reportion 28 AM 10: 49 Tuxachanie Estates PWS 0240089

Is my water safe?

We are pleased to present this year's Annual Water Quality Report (Consumer Confidence Report) as required by the Safe Drinking Water Act (SDWA). This report is designed to provide details about where your water comes from, what it contains, and how it compares to standards set by regulatory agencies. This report is a snapshot of last year's water quality. We are committed to providing you with information because informed customers are our best allies.

Do I need to take special precautions?

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Water Drinking Hotline (800-426-4791).

Where does my water come from?

Our water is supplied by the Graham Ferry Aquifer.

Source water assessment and its availability

The source water assessment has been completed and ranks our water supply as moderate for susceptibility to contamination. This report is available in the office.

Why are there contaminants in my drinking water?

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's (EPA) Safe Drinking Water Hotline (800-426-4791).

How can I get involved?

If you have any questions concerning your drinking water supply, please contact Larry Jones at 228.861.4646.

Description of Water Treatment Process

Your water is treated by disinfection. Disinfection involves the addition of chlorine or other disinfectant to kill dangerous bacteria and microorganisms that may be in the water. Disinfection is considered to be one of the major public health advances of the 20th century.

Monitoring and reporting of compliance data violations

A MESSAGE FROM MSDH CONCERNING RADIOLOGICAL SAMPLING

In accordance with the Radionuclides Rule, all community public water suppliers were required to sample quarterly for radionuclides beginning January 2007 - December 2007. Your public water supply completed sampling by the scheduled deadline; however, during an audit of the Mississippi State Department of Health

Radiological Health Laboratory, the Environmental Protection Agency (EPA) suspended analyses and reporting of radiological compliance samples and results until further notice. Although this was not the result of inaction by the public water supply, MSDH was required to issue a violation. This is to notify you that as of this date, your water system has completed the monitoring requirements and is now in compliance with the Radionuclides Rule. If you have any questions, please contact Melissa Parker, Deputy Director, Bureau of Public water Supply, at 601.576.7518.

Additional Information for Lead

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Tuxachanie Estates is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.

Water Quality Data Table

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of contaminants in water provided by public water systems. The table below lists all of the drinking water contaminants that we detected during the calendar year of this report. Although many more contaminants were tested, only those substances listed below were found in your water. All sources of drinking water contain some naturally occurring contaminants. At low levels, these substances are generally not harmful in our drinking water. Removing all contaminants would be extremely expensive, and in most cases, would not provide increased protection of public health. A few naturally occurring minerals may actually improve the taste of drinking water and have nutritional value at low levels. Unless otherwise noted, the data presented in this table is from testing done in the calendar year of the report. The EPA or the State requires us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not vary significantly from year to year, or the system is not considered vulnerable to this type of contamination. As such, some of our data, though representative, may be more than one year old. In this table you will find terms and abbreviations that might not be familiar to you. To help you better understand these terms, we have provided the definitions below the table.

	MCLG	MCL,	Vann	Do		Cample			
Contaminants Contaminants	or MRDLG	TT, or MRDL	Your Water		nge High	Sample <u>Date</u>	Violation	Typical Source	
	<u>Contaminants</u> MRDLG MRDL Water Low High Date Violation Typical Source Disinfectants & Disinfectant By-Products								
(There is convincing of	evidence th	at additio	n of a di	sinfect	ant is n	ecessary	for control o	f microbial contaminants)	
Chlorine (as Cl2) (ppm)	4	4	1	0.5	1	2011	No	Water additive used to control microbes	
Inorganic Contaminants									
Nitrate [measured as Nitrogen] (ppm)	10	10	0.08	NA		2011	No	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits	
Nitrite [measured as Nitrogen] (ppm)	1	1	0.02	NA		2011	No	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits	

Lead - action level at consumer taps (ppb)	0	15	2.5	200	08	0	0		Corrosion of household plumbing systems; Erosion of natural deposits	
Inorganic Contamin Copper - action level at consumer taps (ppm)	1.3	1.3	0.0435	200	08	0		No	Corrosion of household plumbing systems; Erosion of natural deposits	
<u>Contaminants</u>	MCLG	<u>AL</u>	Water	<u>Da</u>	- 6	xceeding		AL	Typical Source	
226/228) (pCi/L)	0	3	Your	Sam		# Sample		Excee		
Radium (combined		5			0.707	2011			Erosion of natural deposits	
(pCi/L) Uranium (ug/L)	0	30			0.075	2011		No	Erosion of natural deposits	
Alpha emitters	0	15	2.95	2.79	2.95	2011]	No	Erosion of natural deposits	
Radioactive Contam	inants								l.	
Thallium (ppb)	0.5	2	0.5	NA		2011	No		Discharge from electronics, glass, and Leaching from ore-processing sites; drug factories	
Selenium (ppb)	50	50	2.5	NA		2011]	No	Discharge from petroleum and metal refineries; Erosion of natural deposits; Discharge from mines	
Mercury [Inorganic] (ppb)	2	2	0.5	NA		2011	7	Erosion of natural deposits; Discharg No refineries and factories; Runoff from Runoff from cropland		
Fluoride (ppm)	4	4	0.225	NA		2011	1	No	Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories	
Cyanide [as Free Cn] (ppb)	200	200	15	NA		2011]	No	Discharge from plastic and fertilizer factories Discharge from steel/metal factories	
Chromium (ppb)	100	100	0.5	NA		2011			rischarge from steel and pulp mills; Erosion f natural deposits	
Cadmium (ppb)	5	5	0.5	NA		2011]	No	Corrosion of galvanized pipes; Erosion of natural deposits; Discharge from metal refineries; runoff from waste batteries and paints	
Beryllium (ppb)	4	4	0.5	NA		2011	1	No	Discharge from metal refineries and coal-burning factories; Discharge from electrical, aerospace, and defense industries	
Barium (ppm)	2	2	0.00470	NA		2011	2011 No		Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits	
Arsenic (ppb)	0	10	0.555	NA		2011 No		No	Erosion of natural deposits; Runoff from orchards; Runoff from glass and electronics production wastes	
Antimony (ppb)	6	6	0.5	NA		2011	1	No	Discharge from petroleum refineries; fire retardants; ceramics; electronics; solder; test addition.	

Undetected Contaminants

The following contaminants were monitored for, but not detected, in your water.

	MCLG or	MCL or	Your		
<u>Contaminants</u>	MRDLG	MRDL	<u>Water</u>	<u>Violation</u>	Typical Source
Haloacetic Acids (HAA5) (ppb)	NA	60	ND	No	By-product of drinking water chlorination
TTHMs [Total Trihalomethanes] (ppb)	NA	80	ND	No	By-product of drinking water disinfection

Descriptions						
Term	Definition					
ug/L	ug/L: Number of micrograms of substance in one liter of water					
ppm	ppm: parts per million, or milligrams per liter (mg/L)					
ppb	ppb: parts per billion, or micrograms per liter (μg/L)					
pCi/L	pCi/L: picocuries per liter (a measure of radioactivity)					
NA	NA: not applicable					
ND	ND: Not detected					
NR	NR: Monitoring not required, but recommended.					

Important Drinking Water Definitio	ns
Term	MCLG: Maximum Contaminant Lever Goal: The level of a contaminant in drinking
MCLG	water below which there is no known or expected risk to health. MCLGs allow for a
	margin of safety.
	MCL: Maximum Contaminant Level: The highest level of a contaminant that is allowed
MCL	in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.
TT	TT: Treatment Technique: A required process intended to reduce the level of a
••	contaminant in drinking water.
AL	AL: Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.
Variances and Exemptions	Variances and Exemptions: State or EPA permission not to meet an MCL or a treatment technique under certain conditions.
MRDLG	MRDLG: Maximum residual disinfection level goal. The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
MRDL	MRDL: Maximum residual disinfectant level. The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.
MNR	MNR: Monitored Not Regulated
MPL	MPL: State Assigned Maximum Permissible Level
